3. Staff Roster, Salary & Access Control

4. Customer / Client Database

5. Attendance, Leave & Payroll

6. Certificates Module

7. Service Reports (Maker–Checker)

8. Document & Branding Settings

9. Tips, Troubleshooting & Support

10. Quick Reference Cheat Sheet

How to use this guide: Each section mirrors a tab in the Admin Dashboard, in the same left-to-right order they appear in the app. Read top to bottom the first time; afterwards, use it as a lookup reference whenever you're unsure what a button does.

1 Getting Started

Logging In

Open the app and sign in with your **Staff ID** and **Password** (given to you by IT/another Admin). Tick **Remember Password** if this is your own device — it stores your login locally so you don't retype it each time.

Forgot your password? Only another Admin can reset it for you (Staff tab → your card → *Set Password*). There is no public "forgot password" link.

The Dashboard Layout

Once logged in as an Admin you land on the **Admin Dashboard**, which has three layers of navigation you'll use constantly:

- **Executive stat banner** at the top — six clickable cards (Work Orders, Completed, Staff Force, Present Today, Clients, Leave Requests). Tapping any card jumps straight to the relevant tab.
- **Tab bar** — OVERVIEW, PIPELINE, STAFF, CUSTOMERS, ATTENDANCE, LOGS, CERTIFICATES, SERVICE REPORTS. This is the main way you move between modules.
- **Quick-action row** under the tabs — shortcuts to Generate Certificate, New Customer, New Staff Profile, Use Staff Interface, and New Work Order, so you never have to hunt through a tab just to start one of these five common actions.

Global Search & Filters

The search bar at the top searches **Customers, Staff, and Work Orders at once** as you type, showing a grouped drop-down of top matches — click any result to jump straight to it. The funnel/filter icon next to it opens the **Task Filter Modal**, letting you narrow the whole Pipeline view by creation date (with a per-date task count) or by who created each task.

Notifications

The bell icon (top bar) checks for updates automatically. Tapping a notification takes you directly to the relevant tab and pre-filters it — e.g. a leave notification opens Attendance, a task notification opens Pipeline with that task's ID already in the search box.

The OVERVIEW Tab

This is a menu, not a data table. It shows five cards (Task Pipeline, Staff Roster, Client Database, Attendance & Leave, Activity Logs), each with a live count. Tapping a card expands that module's full content right there on the Overview page — a fast way to peek at one module without fully switching tabs.

Tip: Certificates and Service Reports don't have Overview cards — reach them via the tab bar or the quick-action row instead.

Staff-Wise Task Progress Report

A collapsible panel (usually below the banner) showing, per staff member: total assigned / pending / closed tasks and a completion-percentage bar. Use **"View Tasks"** on any row to jump to the Pipeline pre-filtered to

that person's work, or "**Staff Access Accounts**" to open the full impersonation directory (see Section 3).

2 Work Order Pipeline (Tasks)

This is the heart of the system — every job (a "task" / "work order") moves through a fixed pipeline from first enquiry to a completed, certified, paid job.

The Pipeline, Explained

Stage Group	Stages (in order)
Sales (before production)	New Inquiry → Quotation → Quotation Follow-up → Order Confirmation
Production (<i>auto hand-off from Sales</i>)	Material Arrangement / Internal Work → Pickup/Delivery → Service & Maintenance
Sales (after production) (<i>auto hand-off back</i>)	Invoice → Certification → Payment Follow-up → Completed

Auto-recurring jobs: the moment an extinguisher/refill/recurring-type task is marked Completed, the system automatically creates a brand-new "Recurring Inquiry" task dated **11 months later** — this is how the business ensures nobody forgets next year's annual refill. You don't need to create it yourself.

Filtering the Pipeline

- **Status chips:** Pending / Started / In Progress / Completed / ALL.
- **Tag chips:** your own custom labels (e.g. "New Inquiry", "Site Visit"). Use **Manage Tags** to create, rename, recolour, or delete tags — tags are shared company-wide, not personal.

Reading & Using a Task Card

- Tap the company name to expand the row into its full action bar.
- **Triple-tap** the company name to jump straight into *Edit Customer* for that client.
- A red pulsing icon means something's missing — no phone number, no WhatsApp number, or no GPS location. Tap it to fix it immediately in Edit Customer.
- The six-dot handle lets you drag-and-drop reorder tasks in the list (or tap it for Move Up / Move Down buttons). This is just your own visual ordering preference — it isn't shared with other admins or staff.
- A collapsed "last remark" line expands into the full remark history. Use the + button to log a new tagged remark (choose a tag, write the note, **Ctrl+Enter** to save fast).
- If a staff member has requested a task be removed, you'll see an inline **Approve-Removal / Reject-Request** banner right on the card.

The Action Bar (once a task is expanded)

Action	What it does
Conversation / Remark	Opens the tagged discussion log for this task.

Call / WhatsApp	Dials or opens WhatsApp chat directly; if the client has more than one number saved, you'll be asked which one first.
Directions	Opens turn-by-turn Google Maps directions to the client's saved location.
Edit Task	Change description, service type, scheduled date, recurrence, and (free-text) Stage.
Reschedule	Move the job to a new date with a reason.
Change Status	Manually set Started / In Progress / Completed, or clear it back to no status.
Tags	Attach/remove labels on this specific task.
Advance Work Stage	Moves the task to the <i>next</i> stage in the fixed pipeline above (see box below).
Assign Staff	Choose who's responsible. While a task is in the Certification stage, the dropdown defaults to showing only Admin/Supervisor/Certification-department staff (tick a box to see everyone anyway).
Generate Certificate	Jumps to the Certificate Generator for this exact task (see Section 6).
Reactivate	Only shown on Completed jobs — reopens it for further work.
Delete	Permanently removes the task.

Important — how "Advance Work Stage" actually works: it does *not* show you a list of stages to pick from. It simply asks for an optional remark and automatically pushes the task to whatever the *next* stage is supposed to be, following the fixed pipeline table above — including the automatic Sales↔Production hand-offs. If you need to jump to an arbitrary stage out of order, use **Change Status** or edit the free-text **Stage** field under Edit Task instead — those are manual overrides, independent of the automatic engine.

Creating a New Work Order

- 1 Click **New Work Order** (top banner, quick-action row, or Pipeline tab).
- 2 Search for the existing customer, or add a brand-new one on the spot.
- 3 Fill in description, scheduled date, and whether it's one-time or recurring (with interval).
- 4 Assign it to a staff member (or leave unassigned for now).
- 5 Save — it appears at the top of the Pipeline as "New Inquiry".

3 Staff Roster, Salary & Access Control

This tab is where you manage staff accounts, what they can see, and what they're paid.

Each Staff Card Shows

- Staff ID, Status, Role, Department, and contact details.
- **Daily Salary Rate** — editable inline, auto-saves when you click away. This feeds the pro-rata payroll math in Attendance.
- **Access Point & Scope Permission** dropdown, controlling what tasks/customers that person can see:

Permission	What it means
ASSIGNED_ONLY	Sees only their own assigned tasks/shifts (default for field staff).
ALL_CUSTOMERS	Can see the full customer database.
ALL_TASKS	Can see every task in the Pipeline, not just their own.
FULL_ACCESS	Supervisor-level — everything, including staff reassignment rights on tasks.

Buttons on Each Staff Card

Button	What it does
Access Account	Starts <i>impersonation</i> — see the box below.
Task Assigned (N)	Opens the full Staff 360 profile: stats, salary/permission controls, assigned tasks, attendance log, leave history, plus quick "Assign Leave" and "Record Advance" shortcuts.
ID Card	Opens the printable staff ID card (photo, employee ID, blood group, DOB/age, masked Aadhaar, emergency contact). If the staff member has requested an update to their card, you'll see it here to Approve/Reject.
Set Password	Resets that staff member's password. You must re-enter <i>your own</i> current password to confirm, and the new password must meet the policy (8+ characters, a letter, a number, and a special character).
Delete (trash icon)	Removes the staff record entirely.

"Use Staff Interface" / Impersonation: Clicking *Access Account* (or the quick-action bar's *Use Staff Interface*, or the Staff Progress Report panel button) lets you view and operate the app exactly as that staff member would see it — useful for training or troubleshooting what they're seeing. A banner appears at the top of the screen the whole time you're doing this, with a one-click **"Exit & Return to Admin Panel"** button. Anything you add or change while impersonating is saved under your own Admin account behind the scenes, so use it to *look and demonstrate*, not to secretly act as someone else.

Adding a New Staff Member

- 1 Click + **Add New Staff Profile** (Staff tab or quick-action row).

- 2 Enter Name, a Login/Staff ID, a starting password, Mobile number, and Daily Salary Rate.
- 3 Choose their Role (Staff / Supervisor / Admin) and Department (Field Operations / Sales / Production / Service / Certification).
- 4 Set their initial Permission scope (usually `ASSIGNED_ONLY` for new field staff).
- 5 Save — hand them their Staff ID and starting password so they can log in and change it themselves.

4 Customer / Client Database

Bulk Import & Export

The Customers tab has an **Export CSV** button (downloads every customer as a spreadsheet) and an **Upload CSV** button (bulk-adds/updates customers from a spreadsheet). This is currently the *only* tab in the app with bulk CSV import/export — Staff, Tasks, and Attendance don't have it.

Each Customer Card

- **Directions** link — only appears once a GPS location is saved.
- **Fetch GPS** — captures your current location (best used while physically standing at the client's site) and saves it as their map link.
- **Edit** (pencil) — opens the full Edit Customer form.
- **Call** — if multiple numbers are saved for this client, you'll be asked which one to dial.
- **Equipment Master** — opens the client's fire-extinguisher / equipment register: location on-site, client asset ID (e.g. `CYL-2026-001`), item type, manufacture year, last refilling date and next-due date, hydraulic pressure test (HPT) date and due date, and pass/fail checks for body, valve, safety pin, pressure, hose, and seal. **This is the exact data later pulled into IS:2190 compliance certificates**, so keep it accurate.
- **Profile (N)** — opens the full 360 Client Profile (see below).

360 Client Profile

A tagged conversation logger (same tag-and-note system as task remarks) plus a full reverse-chronological history of every call/note logged against this client, and a table of every work order ever raised for them with its current stage.

Edit Customer Fields

Company name, authorised person, mobile, email, address, a GPS map-link field, a lockable **Special Notes** field (for sensitive/security-relevant instructions — requires an explicit "Unlock Notes" confirmation before it can be overwritten, to stop an accidental edit wiping out something important), and a repeatable list of additional contact persons (name/designation/phone/email).

Tip: the GPS field and Special Notes field both lock themselves once filled in, precisely so a careless edit can't silently erase a client's saved location or confidential instructions. You'll always see a confirmation prompt before either can be changed.

5 Attendance, Leave & Payroll

Four stacked sections live under this tab.

1. Leave Request & Approval Queue

A table of every pending/actioned leave request — Staff, Date, Type, Urgent/Standard flag, Reason, and Approve/Reject buttons. Use + **Assign Leave to Staff** to directly grant a leave yourself (Full Day / Half Day / Short Leave) — this bypasses the request/approval flow entirely and shows up on that staff member's dashboard instantly.

2. Staff Master — Standard Daily Salary Rates

Per staff member: their Standard Rate, this month's **Earned** amount, **Advance Paid**, and **Net Balance Payable** (Earned – Advances). You can approve/reject a staff member's requested profile-photo change here too, and use **Set Rate** or + **Pay Advance** per row.

3. Salary Advance Payments Log

A full ledger of every advance ever paid — amount, payment mode (Cash / Bank-UPI / Cheque), remarks, with a delete option and a + **Record New Advance** button.

4. Geotagged Shift Attendance & Payroll Log

The raw punch-in/out ledger. Filter by Staff, Month, On-Time/Late, or free-text search. Each row shows punch times, IN/OUT GPS coordinates (tap to open in Google Maps), the punching device's IP address, a Late/On-Time badge, hours worked, and the auto-calculated daily pay — with an **Override** button if you ever need to manually correct one day's pay.

Payroll rule of thumb: a standard shift is 10 hours, pay is calculated pro-rata against the staff member's Daily Salary Rate, Sundays are paid in full regardless of hours, and the system automatically closes out anyone who forgot to punch out, at around 7:00–7:05 PM IST each day.

6 Certificates Module

Generates the official IS:2190-standard fire-extinguisher compliance certificate a client receives after a service visit.

Reaching the Certificate Generator

Three ways in: the **CERTIFICATES** tab (a worklist of every task currently in the Certification stage, or already Completed, each with a **Generate & Print** button), the amber **Cert** button on any Pipeline task card, or the quick-action row's **Generate Certificate** button for a blank certificate not tied to a task.

The Certificate Editor — Three Tabs

Tab	What you set there
Client	Company name (search existing customers or type a new one), address, contact person/number, certificate number (auto-generated, not editable), issue date and validity, and the Content Lock toggle (see below).
Equipment	Scope of work text, any extra "dynamic" table columns you want on the certificate, the equipment items list itself (add each extinguisher/cylinder with type, capacity, quantity, service date, next-due date), and a custom note area that prints just under the equipment table.
Settings	Certificate type (Refilling / HP Testing / New Fire Extinguisher / System Installation / AMC / Visit Report — each auto-fills sensible defaults), custom intro lines, custom lines below the certify statement, compliance status badge text, validity period, and the authorised signatory name.

Certificate Type Selector

Changing the **Certificate Type** dropdown at the top instantly re-labels the whole document (title, certificate-number prefix, and default validity) for six different situations — Refilling, HP Testing, New Fire Extinguisher, System Installation, AMC, or a plain Visit Report — so you don't have to manually retype boilerplate text for each kind of job.

Custom Lines — Add, Remove, Reorder

Three places on the certificate accept your own free-text lines, each as an open-ended list rather than a single fixed paragraph:

- **Certificate Body Text (Custom Intro)** — prints right below the client's "TO," address block, before anything else.
- **Custom Lines (below the certify statement)** — extra clauses after the standard certifying wording.
- **Custom Notes (after equipment list)** — remarks that print right after the equipment schedule table.

- 1 Type your text into any line's box.
- 2 Click + **Add Line** to add another line underneath it.
- 3 Use the ▲ / ▼ arrows next to each line to reorder them.
- 4 Click the × on a line to remove it.

Tip: leave a line completely blank and it simply won't appear on the printed certificate — there's no empty gap left behind. This means you can prepare a few "just in case" blank lines and only the ones you actually fill in will show.

Validity Period

Quick-pick buttons for 1 / 3 / 5 Year validity appear on both the Client tab and the Settings tab, and default to **1 Year** unless you choose otherwise. You can still type an exact Issue Date / Valid Until date manually if a job needs a non-standard period.

One-Page Guarantee

As you add more equipment rows, the certificate automatically shrinks its table and paragraph spacing slightly so the whole document keeps fitting on a single A4 page — you don't need to trim your equipment list to make it fit.

Locking a Certificate

Once a certificate has been saved/issued (via "Save & Download PDF" or "Mark Certified"), it becomes locked. Every field greys out and can't be edited. To make a correction afterwards, click the lock button (bottom of the Client tab) and confirm *twice* — this bumps the certificate's revision number (e.g. adds "-R1" to the certificate number) so there's always a clear audit trail of what was changed after issue.

Generating the PDF

- **Save & Download PDF** — saves the certificate record and downloads the finished PDF.
- **Print** — opens a print-ready version in a new tab.
- **Mark Certified & Advance Stage** (only shown when opened from a task) — saves the certificate *and* pushes that work order to its next Pipeline stage in one click.

Every certificate embeds a QR code that anyone can scan to verify its authenticity online — this is generated automatically, no setup needed.

7 Service Reports (Maker–Checker)

A separate workflow from Certificates, used for technician-written field service reports.

- **+ Create New Service Report** — starts a fresh report.
- Filter bar: All / Pending Approval / Approved.
- A table of every report with its Reference ID, Customer, Service Date, Technicians involved, and Status.

Maker–checker, explained: a field technician writes and submits a report ("maker"). It then sits as **Pending Approval** until an Admin opens it via the amber **Review & Overwrite** button ("checker") — where you can read it, correct/overwrite anything before approving, and only then does the final multi-page PDF (with repeating company seal and signature) get generated.

8 Document & Branding Settings

An advanced settings screen at `/settings/documents` (type this into the address bar — there's no menu button for it yet). It controls the shared visual building blocks used by both Certificates and Service Reports:

- Which logo/header image, footer image, company stamp, signature image, and watermark to use.
- Whether the header, footer, watermark, stamp, signature, and QR code each show up on Certificates.
- Which table columns (Sr. No., Item Name, Capacity, Qty, Service Date, Next Due) are visible by default on the equipment/service tables.

When to use this: only if the company rebrands (new logo, new authorised signatory image, new stamp) or you want to simplify what appears on printed documents company-wide. Day-to-day certificate generation doesn't need this page at all.

9 Tips, Troubleshooting & Support

Common Questions

Situation	What to do
A staff member forgot their password	Staff tab → their card → Set Password (you'll need to confirm with your own password).
A task is stuck on the wrong stage	Use Change Status or edit the free-text Stage field under Edit Task — don't rely on Advance Work Stage for out-of-order moves.
A client's location/GPS is wrong	Edit Customer → unlock the GPS field (confirm the prompt) → use Fetch GPS while standing at the correct location, or paste the correct map link.
A certificate needs correcting after issue	Open it → click the lock button → confirm twice to unlock (this creates a new revision, e.g. "-R1") → edit → re-save.
You want to see exactly what a staff member sees	Staff tab → their card → Access Account , then use the "Exit & Return to Admin Panel" banner button when done.
A staff member requested a photo/ID-card change	Attendance tab (photo requests) or Staff tab → ID Card (I-card requests) — both need your explicit Approve/Reject.

General Tips

- The app works best online, but many staff-side actions (see the Staff Guide) queue automatically if their connection drops — don't panic if a field technician says they're "offline," their work usually syncs once they're back in range.
- Tags, once created, apply across the whole company — coordinate with your team before renaming or deleting one that's in active use.
- Anything marked with a lock (certificates, GPS fields, special notes) is locked *on purpose* to prevent accidental data loss — always read the confirmation prompt before unlocking.

Support

For anything not covered here, or if something looks broken, contact your IT/technical support contact or the person who manages the CRM system for Expert Safety Solutions.

10 Quick Reference Cheat Sheet

I want to...	Go to
Create a new job for a client	Pipeline → New Work Order
Move a job to its next stage	Pipeline → task → Advance Work Stage
Fix a job stuck on the wrong stage	Pipeline → task → Change Status / Edit Task → Stage
Add a new staff member	Staff → + Add New Staff Profile
See the app as a staff member sees it	Staff → their card → Access Account
Reset someone's password	Staff → their card → Set Password
Add/edit a client	Customers → + / Edit (pencil icon)
Update a client's fire-extinguisher register	Customers → their card → Equipment Master
Import/export many clients at once	Customers → Upload CSV / Export CSV
Approve or reject a leave request	Attendance → Leave Request & Approval Queue
Grant leave directly (skip the request)	Attendance → + Assign Leave to Staff
Pay or log a salary advance	Attendance → + Record New Advance
Manually correct one day's pay	Attendance → punch log row → Override
Generate a compliance certificate	Certificates tab, or the amber "Cert" button on any task
Unlock an already-issued certificate	Certificate editor → Client tab → lock button (confirm twice)
Approve a technician's service report	Service Reports → Review & Overwrite
Change logo/stamp/signature used on documents	Address bar → /settings/documents

End of Admin Training Guide

Keep this document handy for reference. For updates or questions, reach out to your CRM administrator.
