

FIELD SERVICE & CRM PLATFORM

Field Staff User & Training Guide

Your day-to-day guide to Tasks, Attendance, Leave, Earnings & more — on the go, even offline

Expert Safety Solutions • Prepared for field technician & staff training
Version 1.0 • July 2026

Table of Contents

1. Getting Started — Logging In & Finding Your Way Around

2. My Tasks — Your Daily Work List

3. Working a Task — Advance, Reschedule & Log Activity

4. Attendance — Punching In & Out

5. Leave — Applying & Tracking Requests

6. Earnings — Your Pay, At a Glance

7. Generating a Service Report / Certificate

8. My Profile — Photo, ID Card & Password

9. Working Offline — What Still Works Without Internet

10. Tips, Troubleshooting & Support

11. Quick Reference Cheat Sheet

How to use this guide: This app is built for field work — it's designed to keep working even when your signal drops. Read Section 9 carefully so you always know what will (and won't) save automatically when you're offline.

1 Getting Started

Logging In

Sign in with the **Staff ID** and **Password** your Admin gave you. Tick **Remember Password** if this is your own phone, so you don't need to type it every time.

Forgot your password? You can't reset it yourself from the login screen — ask your Admin to reset it for you (or use *Change My Password* from your profile once logged in, if you still remember your current one).

Finding Your Way Around

- There's no big tab bar like the office computer — on your dashboard, **Tasks** is your home screen.
- Everything else (Attendance History, Apply Leave, My Leave Applications, Earnings, your Profile) lives behind the **profile/avatar button** at the top — tap it to open your personal menu.
- A **Wi-Fi icon** in the top bar shows whether you're online or offline right now.
- The **bell icon** shows notifications — tapping one jumps you straight to the relevant task, leave request, or your profile.

Tip: if you ever see a coloured banner appear just below the top bar, it's telling you about your connection status — see Section 9 for exactly what it means.

2 My Tasks — Your Daily Work List

Your task list is grouped into three parts: **Today Task**, **Tomorrow Task**, and **Upcoming Task**. Anything overdue (past its date, not yet completed, and untouched since) shows up under Today with a red flag, so nothing quietly slips through the cracks.

Finding a Task

- Use the search box to find by company name, mobile number, contact person, address, or task ID.
- Filter by status: Pending / Started / In Progress / Completed / ALL.
- Filter by tag chips (set up by your Admin) — see live counts of how many tasks match each tag.
- Use the filter icon for date-based or "who created it" filtering.

Reading a Task Card

- Tap the company name to expand it and reveal the action icons.
- **Triple-tap** the company name to jump straight into editing that customer's details.
- Red pulsing badges mean something's missing (no phone number, no WhatsApp, or no saved location) — tap the badge to fix it immediately.
- Tap the last remark line to see the full conversation history for that job.
- Use the six-dot handle (drag, or tap for Move Up/Move Down) to reorder tasks within their Today/Tomorrow/Upcoming group — this is just your own personal ordering.

Task Actions

Icon / Button	What it does
Conversation	Opens the remarks/discussion log for this job.
Call / WhatsApp	Dials or opens WhatsApp — if the client has more than one number, you'll be asked which one.
Directions	Opens Google Maps directions straight to the client's saved location.
Edit	Update description, service type, date, or recurrence.
Reschedule	Move the job to a new date — you must give a reason and your location is captured automatically.
Status	Mark Started / In Progress / Completed, or reset to no status.
Tags	Attach or remove existing tags on this job.
Advance Stage	Push the job to its next pipeline stage (see Section 3).
Reactivate	Only on Completed jobs — reopens it if more work is needed.
Remove	Sends a removal <i>request</i> to your Admin — it does not delete the job by itself. Your Admin must confirm it.

Adding a New Field Task

- 1 Tap + **Add New Field Task**.
- 2 Search for the customer, or tap "+ New Customer?" to add one on the spot (with a Fetch GPS button to save their exact location).
- 3 Enter a description, scheduled date, and whether it's one-time or recurring.
- 4 Save — it appears in your task list right away.

Talking to a Client — the Discussion Log

Tap the conversation icon to add a tagged remark (Call, Pickup, Delivery, Meeting, Quotation Mailed, etc., or your own custom tag). This log is **shared** — every staff member and Admin sees the same conversation history for a client, so anyone picking up the job later knows exactly what's already been said.

5-minute edit window: you can only correct a remark you wrote within 5 minutes of posting it. After that, it's locked in as a permanent record.

Use the red **Master Search** icon inside the remarks screen to search a client's *entire* conversation history across every job and every staff member who has ever spoken to them.

3 Working a Task — Advance, Reschedule & Log Activity

Three actions share the same pattern: they all need your **location (GPS)**, and can all optionally include a **photo** as proof of the visit.

Action	When to use it
Advance Stage	You've finished your part of the job and it's ready to move to the next step in the pipeline (e.g. from "Material Arrangement" to "Pickup/Delivery"). No need to pick the next stage yourself — the system knows the correct order.
Reschedule	The visit needs to happen on a different date. You must type a reason — it won't let you submit a reschedule with a blank remark.
Activity Log	You did something worth recording that isn't a stage change (e.g. a site inspection, a follow-up call in person) — describe the "Action Taken."

Attaching a Photo

Tap the camera/photo control to take a picture or choose one from your gallery. The app automatically shrinks and compresses it before sending, so it uploads quickly even on a weak signal — you don't need to resize anything yourself.

Your Location is Captured Automatically

The moment you open any of these three action screens, the app starts finding your GPS location in the background — you don't need to press a separate "get location" button.

If your GPS looks off or the screen won't submit: step outside or somewhere with a clearer sky view and try again — the app needs a reasonably accurate fix before it will let the action go through (see Section 4 for the same rule applied to attendance).

Editing a Task

You can update description, service type, date, and recurrence. Reassigning a job to a different staff member is only available to Supervisors/Managers or staff with elevated access — if you don't see that option, that's expected for your role.

4 Attendance — Punching In & Out

How to Punch In / Out

Open your profile menu — the Punch In / Punch Out control sits right there, showing your current shift status and today's punch-in time.

- 1 Tap **Punch In** (start of shift) or **Punch Out** (end of shift).
- 2 The app requests a fresh, high-accuracy GPS fix — this can take a few seconds, especially indoors.
- 3 Punch Out asks you to **confirm a second time** before it actually ends your shift, so an accidental tap won't cut your day short.

GPS accuracy is strictly enforced. If your phone can't get a precise-enough location (for example, GPS is switched off, you're deep indoors, or you denied location permission), the punch will be **blocked** with a message asking you to enable high-accuracy location and try again. There is no way to punch in/out without a good GPS fix — this protects everyone's attendance record.

Punch in/out does NOT work offline. Unlike Advance Stage, Reschedule, and Activity Log (Section 9), a punch attempt made with no internet connection will simply fail with an error — it is *not* saved for later. Make sure you have at least a weak signal before punching in or out, or wait until you do.

Viewing Your Attendance History

Your profile menu → **Attendance History** shows every past punch record: date, On Time / Late badge, punch-in and punch-out times, hours worked, and your calculated pay for that day. Filter by month, sort order, or On-Time/Late only.

How pay is calculated: a standard shift is 10 hours, your pay is worked out proportionally against your Daily Salary Rate, and Sundays are paid in full. If you forget to punch out, the system automatically closes your shift for you at around 7:00–7:05 PM.

5 Leave — Applying & Tracking Requests

Applying for Leave

- 1 Profile menu → **Apply for Leave**.
- 2 Pick the date and duration: **Full Day**, **Half Day**, or **Short Leave** (Short Leave lets you set a start and end time).
- 3 Tick **Urgent Emergency Leave** if this is a same-day/short-notice request.
- 4 Write your reason — this is required.
- 5 Submit.

7-day notice rule: standard (non-urgent) leave must be requested at least 7 days before the date. If you try to submit for a sooner date without ticking Urgent, the app will block it and ask you to mark it urgent instead. Urgent leave has no notice-period restriction — use it honestly for genuine emergencies.

Tracking Your Requests

Profile menu → **My Leave Applications** shows every request you've made, each with a status:

Status	Meaning
Pending	Waiting for your Admin to review it.
Approved	Confirmed — you're good to go.
Rejected	Not approved — speak to your Admin if you need to understand why.

There's no self-service cancel/edit button here — if you need to change or withdraw a request, speak to your Admin directly.

6 Earnings — Your Pay, At a Glance

Profile menu → **My Earnings** gives you a live, read-only summary:

- **This Month Earned** — total pay calculated from your attendance so far this month.
- **Today's Earned** and your **Standard Daily Rate**.
- If you've taken any salary advances, an **Advance Deduction** panel shows $\text{Total Earned} - \text{Total Advance} = \text{Net Payable Balance}$.
- A **Task Progress** summary — how many jobs assigned to you are completed vs. still pending, and your completion rate.

Tip: this screen is for your information only — all figures come directly from your synced attendance and advance records, nothing here can be edited by you.

7 Generating a Service Report / Certificate

You don't need an Admin for this — every staff member can generate the client-facing PDF report or fire-safety certificate themselves.

- 1 From the Tasks screen, tap **Service Report** in the header.
- 2 Fill in the service/report details for the job you just completed.
- 3 Generate the PDF — it includes a scannable QR code so the client (or anyone) can verify it's genuine.

Good to know: a report you submit isn't necessarily final — your Admin may review and, if needed, correct it before final approval. That's normal quality control, not a sign you did something wrong.

Profile Photo

Profile menu → tap your photo/avatar → choose a new picture. This doesn't change instantly — it's sent as a **request** and only takes effect once your Admin approves it.

ID Card

Profile menu → **View ID Card** shows your printable staff badge (photo, role, Employee ID, blood group, DOB/age, emergency contact, masked Aadhaar). If any detail is wrong, tap **Request Update**, fill in the correct information, and wait for Admin approval — you can't edit these fields directly yourself.

Change My Password

Profile menu → **Change My Password** — you'll need your current password plus a new one that has at least 8 characters, one letter, one number, and one special character.

Company Details & QR Codes

Profile menu → handy reference info you can show a client on the spot: company billing/GST details, bank account details (with QR code for instant payment), and a Google Review QR code you can hold up to ask a happy client for a quick review.

9 Working Offline — What Still Works Without Internet

This app is built for the field, where signal isn't always reliable. Here's exactly what happens when you lose connection:

What You Can Still See

Your task list, attendance history, leave requests, and earnings all keep showing your last-synced information, even with zero signal — so you're never staring at a blank screen just because you walked into a basement or a remote site.

What Gets Saved for Later (Queued)

Action	Offline behaviour
Advance Stage	Saved on your phone and shown as "Advancing (Queued Offline)" — sends automatically once you're back online.
Reschedule	Saved on your phone, shown as "(Queued)" — sends automatically once back online.
Activity Log	Saved on your phone — sends automatically once back online.

What Does NOT Get Saved for Later

Punch In / Punch Out, applying for Leave, and posting a remark/conversation note are NOT queued. If you try any of these while offline, you'll simply see an error and need to try again once you have a signal. Don't assume these "went through" just because you tapped submit while offline.

The Offline Banner

- **Red banner:** you're currently offline — any of the three queueable actions above will be saved locally, showing how many are waiting to sync.
- **Amber banner:** you're back online with items still waiting to sync — tap **Sync Now** to push them immediately, or just wait, since the app also syncs automatically in the background.

Tip: if you're heading somewhere with known poor signal, try to punch in and apply for any leave *before* you go — then use Advance Stage/Reschedule/Activity Log freely once there, knowing they'll catch up automatically.

10 Tips, Troubleshooting & Support

Situation	What to do
Punch In/Out button won't work	Check you have GPS/location switched on and a reasonable signal — the app needs a precise location fix and does not queue attendance for later.
Leave request got blocked	You're likely inside the 7-day notice window — tick Urgent Emergency Leave if it's genuinely short-notice.
Reschedule won't submit	Make sure you've typed a reason in the remarks box — it's required.
A task's location/contact is wrong	Tap the red badge on the task card, or triple-tap the company name, to open Edit Customer and fix it.
You need to cancel a job entirely	Use the Remove action — it sends a request to your Admin, who must confirm it. You can't delete a task outright.
Your profile photo/ID card change hasn't appeared	These always need Admin approval first — check back after your Admin has had a chance to review it.
Something seems stuck after going offline	Check the banner at the top — if it's amber, tap Sync Now . If it's still red, you're still offline; try again once you have signal.

Support

For anything not covered here, contact your Admin or supervisor.

11 Quick Reference Cheat Sheet

I want to...	Go to
See today's/tomorrow's/upcoming jobs	Tasks (home screen)
Add a new job on the spot	Tasks → + Add New Field Task
Move a job to its next stage	Task card → Advance Stage
Change a job's date	Task card → Reschedule (reason required)
Record a site visit/inspection note	Task card → Activity Log
Start/end my shift	Profile menu → Punch In / Punch Out
See my past attendance & pay	Profile menu → Attendance History
Apply for leave	Profile menu → Apply for Leave
Check my leave request status	Profile menu → My Leave Applications
See how much I've earned	Profile menu → My Earnings
Generate a service report/certificate	Tasks → Service Report button
Update my profile photo	Profile menu → tap avatar (needs Admin approval)
Fix my ID card details	Profile menu → View ID Card → Request Update
Change my password	Profile menu → Change My Password
Show a client our bank/QR/GST details	Profile menu → Company Details & QR Codes
Push queued offline actions now	Amber banner → Sync Now
